

First Sign® Early Intervention

The Outcomes Standard™ for Early Intervention

Precise. Benchmark Analytics spent years developing the world's largest database on officer performance. It serves as the foundation of First Sign Early Intervention, incorporating decades of evidence-based research and data from robust information sources to provide a comprehensive view into officers.

Predictive. Our predictive analytics have been validated through a standardized national model developed in partnership with the **University of Chicago**. This allows us to go well beyond standard early warning systems, tracking over 20 event markers shown to lead to truly at-risk, off-track behavior.

Proactive. With our technology, police agencies can deliver proactive, career-saving intervention and officer support to those who truly need it. First Sign Early Intervention also helps with officer retention and morale as well as improves community relations and fosters public trust.
